

## Dear Customer!

Since the beginning of the operation Titan Eko Sp. z o. o is associated with high quality innovative solutions supported by awareness raising activities in the field of environmental protection. Titan Eko is part of the international group Kingspan Group PLC which is renowned throughout the construction industry for its technical expertise, high quality products and innovative solutions. This, combined with the Group's solid technical and logistic background, has led to its position as an international market leader.

We are a pioneer in the manufacture of complete solutions for the storage and distribution of fuels, AdBlue®, bio-diesel, rainwater as well as road barriers and bunded pallets. Tanks and containers of Titan Eko are the highest quality products used in many sectors of the industry in Poland and abroad.

Due to the continuous development and strengthening the position of Titan Eko on the international markets as well as to highlight the membership of the Kingspan Group we decided to unify the image of our company.

Planned changes relate to the systematization of our brand portfolio and the adoption of a unified, common name for both the Polish and international markets.

The main change will involve the replacement of the existing name and logo of Titan Eko with the name and logo of Kingspan Environmental. It will highlight our past actions, that is, building confidence of Our Customers based on the highest standards of quality and concern for the environment.

We believe that the changes will help Our Customers to favorably benefit from the wide range of Kingspan Environmental. They will allow us to quickly and simply meet the needs of rapidly changing market. They will emphasize our strengths and strengthen our relations based on partnership, which is a common way to success.

Kind Regards

Piotr Antczak  
General Manager

Michael Engsted  
Managing Director Europe

## Titan Eko changes its name to Kingspan Environmental!

The previous logo of Titan Eko

**TITAN**  
e k o

will take the following form:
